Objective

Experienced Senior Manual QA Engineer with 10+ years of experience in Web, Mobile, API, and Enterprise System Testing across Banking, Fintech, Forex Trading, and Digital Platforms.
Seeking to contribute strong expertise in requirement analysis, test design, exploratory testing, defect investigation, and end-to-end system validation to deliver high-quality and reliable software products.
Skilled in collaborating with developers, business analysts, and cross-functional teams in Agile/Scrum environments to improve product quality, system stability, and user experience.
Strong analytical thinking, attention to detail, troubleshooting ability, and commitment to continuous improvement in software quality assurance.

Education

Bachelor of Information Technology **2010 - 2014**

FPT University

Work experience

Senior QA Engineer **Jan 2025 - Present**

CTECH - Retail Banking System

Responsibilities

- Analyzed FSD, Design, and technical specifications for retail banking systems.
- Designed test scenarios, test cases, checklists, and test reports for Web and Mobile banking applications.
- Performed Functional, Regression, Integration, System, Smoke, Sanity, and Exploratory Testing.
- Conducted API testing, backend workflow validation, and service integration testing using Postman.
- Executed cross-platform, responsive, and cross-browser testing across Web, Android, and iOS platforms.
- Validated end-to-end banking workflows including onboarding, authentication, transfers, bill payment, QR payment, card management, deposits, notifications, and account services.
- Tested integrations between RDB applications and enterprise banking systems including Payment Hub, CBS, Authentication, Notification, and Transaction Processing services.
- Verified transaction processing, payment routing, fee calculation, transaction limits, account balance synchronization, and backend data flows.
- Investigated issues using browser console logs, network analysis, and application logs.
- Collaborated closely with Developers, BAs, Product Owners, and Team Leaders to clarify requirements and resolve issues.
- Performed defect tracking, root cause analysis, bug verification, SIT/UAT support, and release validation.
- Participated in Agile/Scrum activities including sprint planning, backlog grooming, daily stand-ups, retrospectives, and release activities.
- Mentored junior QA members and contributed to QA knowledge sharing and process improvement initiatives.

Senior QA Engineer **Jan 2025 - Present**

CTECH - AI chatbot

Domain: Banking / AI Chatbot
Developed and tested an AI-powered Banking Chatbot integrated with the bank's website to support customers with banking FAQs, product information, and service navigation.
Responsibilities:

- Created test cases and validated chatbot conversation flows and response accuracy.
- Tested intent recognition, keyword matching, fallback handling, and response consistency.
- Validated FAQ accuracy, product recommendation links, and customer support redirection flows.

- Performed Functional, Regression, Integration, and Exploratory Testing.
- Conducted API testing and backend workflow validation using Postman.
- Tested multilingual responses, UI behavior, and responsive Web/Mobile experiences.
- Investigated issues using browser console logs, network requests, and API responses.
- Worked closely with Developers, BAs, and Product Owners in Agile/Scrum environment.

Senior QA Engineer **Dec 2021 - Dec 2024**

TYME DIGITAL BANK

Responsibilities

- Collaborated with global Agile/Scrum teams in a large-scale digital banking ecosystem.
- Participated in sprint planning, backlog grooming, retrospectives, and release activities.
- Analyzed business requirements and created test strategy, test plans, and test cases.
- Performed REST API validation and backend microservice testing for digital banking services.
- Verified request/response payloads, business logic, and workflow integrations using Postman.
- Performed backend validation and workflow verification for digital banking services.
- Conducted UI functional, regression, integration, and exploratory testing for customer-facing digital banking applications.
- Performed cross-platform testing across web and mobile banking applications.
- Analyzed browser console logs and network requests to investigate issues and support debugging.
- Performed non-UI validation including API, workflow, backend services, and batch processing.
- Executed mobile banking testing on iOS, Android, USSD, and Android Kiosk platforms.
- Coordinated with Product Owners, Developers, and international stakeholders to ensure release quality.
- Participated in defect triage, bug analysis, and production issue investigation.

QA Enginee **Apr 2021 - Nov 2021**

AXLEHIRE

Responsibilities

- Created test plans, test cases, checklists, and testing documentation.
- Performed UI functional testing, regression testing, integration testing, and workflow validation.
- Validated REST API integrations between routing systems and mobile applications.
- Validated backend workflows and API integrations between systems and mobile applications.
- Tested logistics workflows, routing management, dispatcher systems, inbound/outbound applications, and driver applications.
- Worked closely with Product, Design, and Development teams to ensure software quality.
- Performed responsive web/mobile testing and cross-browser validation.

- Investigated browser console logs and API/network requests for issue analysis.
- Evaluated test results, tracked defects, and supported release verification.

Test Engineer / Test Leader **Oct 2014 - Mar 2021**

YUMESHIN - TRSSC – Social Min FX

Project Overview

Participated in testing activities for an enterprise Forex Trading platform supporting online currency trading and financial transaction management for users and administrators.

The platform included:

- Web trading platform
- Mobile trading applications
- User account & wallet management
- Deposit / Withdrawal services
- Internal transfer services
- Trading order management
- Market information display
- Notification & reporting services
- Admin management portal

The system supported real-time financial operations and transaction processing with high requirements for stability, accuracy, and security.

Responsibilities

- Analyzed business requirements, specifications, and workflow documents for trading and financial features.
- Created test scenarios, test cases, checklists, and test reports for web and mobile trading systems.
- Performed Functional Testing, Regression Testing, Integration Testing, System Testing, and Exploratory Testing.
- Conducted API testing and backend workflow validation for transaction-related services.
- Tested trading workflows including:
    - User registration & login
    - Wallet management
    - Deposit & withdrawal
    - Internal transfer
    - Trading order execution
    - Transaction history
    - User profile management
- Validated real-time transaction processing and synchronization between frontend and backend services.
- Performed cross-browser and cross-platform testing for web and mobile applications.
- Conducted UI testing and workflow verification for customer-facing trading applications.
- Investigated issues using browser console logs, network requests, and application logs.
- Performed defect tracking, bug reporting, retesting, and regression verification.
- Worked closely with developers, project managers, and Japanese customers to clarify issues and validate fixes.
- Participated in release testing and production verification activities.
