- Familiar with working on relational databases such as MySQL, PostgreSQL, and performing end-to-end data validation in ETL workflows

SKILLS

- **MAJOR**
 - Manual Testing of deep knowledge
 - API testing of deep knowledge
 - Automation testing: mobile, web, api

- o Database structures: MSSQL, Oracle, MySQL, MongoDB
- o Business Analyst
- **MANAGEMENT**
 - o Leadership Skills
 - o Organizational Skills
 - o Collaboration Skills
 - o Operating systems
 - o Emotional Intelligence
 - o Time Management
 - o Decision Making Skills
- **TOOL**
 - o Jira
 - o Java, Python, RestAssure, Selenium, Robot framework, Postman, Jenkins
 - o Oracle, SQL Server, MySQL, Oracle, MongoDB, Kafka

EDUCATION BACKGROUND

- Bachelor of Information Technology, 2011, Electric Power University, Ha Noi

EXPERIENCE

Techlab

Nov, 2025- Now

Position	Senior Tester
Detailt project	• Tikop Application: A smart Fintech application focused on micro-investment and personal wealth management. The platform empowers users to manage their personal finances by offering flexible savings packages and accessible investment opportunities in reputable mutual funds with minimal capital, supported by a transparent and secure transaction reporting system.
Responsibiliti es	• Create detailed test plans and provide effort estimations for new and updated features • Write, review, and execute test cases; document and report test results clearly • Design and implement automated test scripts to cover core business logic; manage source code using GitLab

-
- Refactor existing automation test cases to improve maintainability and efficiency
 - Configure and execute automated tests using Jenkins
 - Support and guide Junior, Middle, and Fresher testers in improving their testing skills
 - Work closely with Product Owners and Developers to ensure product quality in each release
 - Contribute to building a strong testing culture and sharing knowledge within the team

MSB

Aug, 2022- Nov, 2025

Position

Senior Tester

Detailt
project

- **Digi Sale:** A mobile-based sales enablement platform designed for MSB's internal sales force to manage the end-to-end sales lifecycle and lead generation. The system provides robust tools for tracking the sales pipeline and monitoring business performance in real-time to optimize sales efficiency.
- **MSB Pay & CRM:** An integrated solution combining a transaction management gateway and a Customer Relationship Management (CRM) system. MSB Pay facilitates multi-channel payment connectivity and processing, while the CRM component synchronizes data from various touchpoints to create 360-degree customer profiles for personalized service experiences.
- **MSB M-connect:** A lifestyle and community engagement application tailored for users within the MSB ecosystem. The platform integrates diverse features including news updates, event management, and fitness tracking (MRun) to foster deeper interaction and engagement between the bank and its community.

Responsibiliti
es

-
- Collaborate with QA Lead, techlead, and product teams to understand requirements and define testing approaches
 - Create detailed test plans and provide effort estimations for new and updated features
 - Write, review, and execute test cases; document and report test results clearly
 - Design and implement automated test scripts to cover core business

	logic; manage source code using GitLab • Refactor existing automation test cases to improve maintainability and efficiency • Configure and execute automated tests using Jenkins • Support and guide Junior, Middle, and Fresher testers in improving their testing skills • Work closely with Product Owners and Developers to ensure product quality in each release • Contribute to building a strong testing culture and sharing knowledge within the team
