

NGUYEN THU TRA

Quality Assurance

Mail: trant.loyce@gmail.com

Phone: +84 333 140 686

Addr: Yen Hoa street, Cau Giay, Ha Noi

PROFESSIONAL SUMMARY

- Detail-oriented QA Engineer with 4+ years of experience in software testing, specializing in both manual and automated testing for mobile applications, web platforms, and blockchain-based products
- Hands-on experience working with databases on a daily basis, including writing and executing SQL queries to validate data integrity and investigate issues
- Skilled in API testing and automation, with the ability to build CI test scripts for API validation and experience using both Postman and DBeaver (an open-source, free alternative that integrates well with GitHub)
- Proficient in a wide range of QA tools, including VSCode, JMeter, Jenkins, Rancher, Kibana, BrowserStack, OctoPerf and GTMetrix to ensure product quality, performance, and stability
- Experienced in leveraging AI tools to improve testing efficiency and day-to-day productivity.
- Proficient in test management and collaboration tools such as Jira, Trello, Confluence, ClickUp, Linear, QASE and Notion
- Strong problem-solving skills demonstrated through research, data analysis, and effective teamwork under pressure
- Excellent English communication skills, with a proven ability to write clear documentation and contribute meaningfully to team discussions and product documentation

DOMAIN TESTING

- Blockchain domain
- E-commerce domain
- Fintech domain

LANGUAGES

- English: Strong communication and documentation skills
- Chinese: Good communication

TECHNICAL SKILLS

- Software testing: Mobile App, Website
- Project Management Tools: Jira, Trello, Confluence, Clickup, Notion, QASE, Linear
- Testing tools: VScode, Postman, DBeaver, Jmeter, Jenkins, Rancher, Kibana, BrowerStack, GTMetrix, OctoPerf

HIGHTLIGHT PROJECTS

CATDANO

Projects Description	• Minswap is a leading multi-pool AMM decentralized exchange (DEX) built on the Cardano blockchain, allowing users to swap tokens, provide liquidity, and participate in yield farming. As one of the largest DEXs on Cardano by users and liquidity, it handles a high volume of on-chain transactions across both web and mobile platforms • Noodles Finance is the financial gateway for the Sui ecosystem, combining real-time data, analytics, token swapping, lending, and vaults into a single platform, along with a data API for developers. Focused exclusively on Sui, it serves a large and active user base across both web and mobile, handling high volumes of on-chain transactions and real-time market data
Working time	July 2025 to Present
Position	QA
Teamsize	14 (3 testers)
Responsibility	• Performed end-to-end testing across web and mobile, covering core DeFi flows (swapping, liquidity, yield farming, wallet connection) including UI, API, database, and on-chain behaviors • Designed and executed detailed test cases, validated APIs with Postman and DBeaver, and built CI test scripts to automate API checks within the development pipeline • Worked with databases daily, writing SQL queries via DBeaver to verify data integrity, reconcile on-chain/off-chain data, and investigate root causes • Adopting Playwright to build automated end-to-end UI tests, improving regression coverage and reducing manual testing effort • Ran performance and load testing with monitored system health to ensure stability under high transaction volumes • Provided direct user support via Discord, addressing user inquiries and guiding them through product features and issue resolution • Collaborated with developers and PO to track bugs and ensure timely releases, while leveraging AI tools to speed up test case generation and documentation
Skills	• Test Automation: Built automated test scripts for API and end-to-end UI testing using Playwright and scripts • AI-Assisted Working: Applied AI tools to boost productivity in test case generation, documentation, and problem-solving • Critical Thinking: Strengthened analytical skills to identify root causes and assess edge cases effectively • Communication: Improved collaboration and user-support skills through clear, effective communication

BLABS

Projects Description	• DEX Aggregator: Optimizes token swap rates by routing trades across multiple decentralized exchanges. Launching on both EVM and non-EVM chains (including Aptos) • DEX Perpetual Trading: Enables decentralized trading of perpetual contracts with leverage, without intermediaries • Liquidity Pool V2/V3: Implemented advanced AMM logic for efficient token swaps and concentrated liquidity provisioning • Vote Escrow ve(3,3): Developed a tokenomics model integrating vote-escrow locking with (3,3) incentives to drive long-term alignment, gauge voting, and emission control • Explorer: Built a blockchain explorer to track transactions, blocks, addresses, and smart contract activity with real-time data visualization
Working time	September 2023 to July 2025
Position	QA
Teamsize	13 (2 testers)
Responsibility	• Planned and organized testing schedules for the QA team to ensure product quality and timely delivery • Executed test cases, logged bugs, and applied appropriate testing methodologies to maximize product coverage • Facilitated retrospectives after each product phase, reported on development quality, and collaborated with the team to propose improvements for future projects • Wrote test scripts for the aggregator product using JavaScript; built an automated hourly testing system to simulate swaps, including large-volume test scenarios • Managed the QA script repository, regularly deployed and modified testing scripts to align with product updates • Designed a real-time alert and notification system integrated with Discord to promptly inform the team of incidents and enable quick resolution • Supported the Product Owner in preparing business requirement documents (BRD) and software requirement specifications (SRS)
Skills	• Critical Thinking & Communication: Strong analytical skills, with experience in presenting and training basic QA concepts for new team members • Research & Analysis: Conducted market research to understand project landscapes and competitive features • Technical Skills: ◦ Test Design & Execution: Strong in designing test cases and executing them based on product requirements ◦ API Testing: Proficient in testing RESTful APIs using Postman ◦ Coding: Capable in JavaScript, supporting transaction simulation and test script development ◦ Performance Testing: Experience using JMeter for load and performance testing ◦ Test Planning: Built effective test plans and strategies to prioritize coverage, optimize effort, and ensure thorough testing within tight timelines • Tools & Platforms: ◦ Project Management: Trello, Notion ◦ Development & Testing: VSCode (test script writing), Postman (API testing), JMeter (performance testing), Github, Jenkins, Kibana, Rancher, Stackbrowser (cross-browser testing), Bluestacks (mobile emulation)

KIOTVIETWEB

Project Description	KiotViet web is an add-on product on the sales management software. Merchant can create a website for their own store with a variety of interfaces that are suitable for many industries with just one touch.
Working time	August 2022 - September 2023
Domain	E-commerce
Position	Manual Tester
Teamsize	17 (4 testers)
Responsibility	• Analyzed requirements and resolved stakeholder queries • Designed and executed test cases from specifications • Tracked and managed defect status • Supported designers in UAT for quality assurance
Skills	• Strong critical thinking and research skills • Expertise in test design and test case development • Proficient with JIRA and Confluence • Skilled in Postman and Stackbrowser testing tools

TECHLAB

Project Description	Provide optimal, fast Fintech solutions through mobile apps
Working time	March 2022 to August 2022
Domain	Fintech
Teamsize	14 (2 testers)
Position	Manual Tester
Responsibility	• Analyzed product requirements and clarified ambiguities with stakeholders • Designed and executed test cases from functional specs • Tracked and managed defect status throughout development • Supported designers in User Acceptance Testing (UAT) for quality assurance
Skills	• Strong critical thinking and information research abilities • Proficient in test design techniques for effective test coverage • Familiar with project and task management tools: ClickUp, Trello • Experience with mobile app testing using Bluestacks emulator
