

Bùi Phương Lan

(FRESHER MANUAL TESTER)

CAREER OBJECTIVE

Manual Tester with 1 year of experience in software testing within a corporate environment. Experienced in Functional Testing, API Testing, and Database Testing.

Seeking an opportunity to work in a professional environment where I can continuously improve my testing skills, expand my knowledge in both Manual and Automation Testing, and advance toward higher positions in Quality Control (QC).

Short-term goal: Obtain the ISTQB certification and become a Junior Tester.

WORK EXPERIENCE

Fresher Tester | HBLAB Company
03/2025 – Present

TOOLS

- Excel / Google Sheets
- Word / Google Docs
- PowerPoint
- Postman
- MySQL / DBeaver
- Canva
- Backlog (Nulab)

TECHNICAL SKILLS

- Generate test cases using AI tools (Claude)
- Design and maintain 150–200 test cases per module, ensuring adequate coverage of key business flows
- Perform testing across multiple platforms and devices (Desktop, iPhone, iPad)
- Conduct API Testing using Postman and GraphQL
- Use SQL to query and validate data between the system and database
- Track and manage defects using Backlog (Nulab)
- Participate in Agile/Scrum and Waterfall software development projects
- Collaborate with Developers and Business Analysts to resolve issues
- Create test reports and evaluate system quality before release
- Participate in User Acceptance Testing (UAT) to ensure business requirements are met
- Experience working on projects without formal specification documents

SOFT SKILLS

- Requirement analysis
- Independent working ability
- Effective teamwork and collaboration
- Logical thinking and problem-solving skills
- Strong attention to detail
- Communication and cross-functional collaboration skills (Developers, BAs)
- Time management and task prioritization
- Fast learner with a proactive attitude toward feedback

PROJECTS

1. Gadgetlog_Lashinbang (Tháng 6/2025)

Description: An e-commerce website that simulates Lashinbang's anime merchandise marketplace, supporting product search, shopping cart, and online ordering features.

Responsibilities:

- Analyzed requirements and identified testing scope for key functionalities
- Designed, executed, and reviewed test cases for Functional Testing and API Testing
- Created API test cases for CRUD operations, validating request/response data and business logic
- Performed API testing using Postman and verified data using MySQL
- Logged, tracked, and verified defects using Backlog (Nulab)

Tools: Postman, MySQL, Google Sheets, Backlog (Nulab)

2. Agilearn_Evaluation (Tháng 7 - 10/2025)

Description: A localization project that converted the Agilearn online learning platform into Japanese.

Responsibilities:

- Worked directly with clients and Project Managers to gather requirements in a project without formal specifications
- Independently managed testing tasks throughout the project lifecycle
- Designed and executed Integration Test Cases and business-flow test cases
- Tested UI, content display, and functional workflows after language conversion
- Verified layout consistency, data accuracy, and screen uniformity
- Logged defects and collaborated with Developers to resolve issues
- Prepared weekly reports and final test reports, summarizing testing results and defect status

Tools: Google Sheets, Backlog (Nulab)

3. UserManageSystem (Tháng 11 - tháng 12/2025)

Description: A user management system integrated with Microsoft Entra ID for authentication and access control.

Responsibilities:

- Analyzed requirements and tested user management, static group, privilege group, and scheduling functionalities
- Designed and executed test cases for Functional Testing, API Testing, and business workflows
- Tested GraphQL APIs and validated request/response data for queries and mutations
- Used SQL to verify data integrity after user information updates
- Tested authorization, user status management, and data processing workflows
- Collected test evidence, logged defects, and performed defect verification after fixes

Description: A Landing Page Management System supporting site administration, data management, and system configuration.

Responsibilities:

- Utilized Claude AI to generate test cases and improve test coverage
- Performed Functional Testing for site management, CRUD operations, user authorization, and system data management
- Logged, tracked, and verified defects after fixes
- Recorded testing evidence and demo videos for reporting and client confirmation

Tools: Google Sheets, Backlog (Nulab), Claude AI
