SUMMARY

QA Engineer with 4 years of experience in manual testing for web, mobile, and backend-integrated systems across enterprise platforms, project management systems, airport service platforms, and blockchain products. Experienced in requirement analysis, test case design, checklist creation, functional testing, regression testing, API testing, database validation, and release verification in Agile/Scrum environments. Strong in identifying business logic gaps, edge cases, validation issues, permission-related defects, and cross-module dependencies. Hands-on experience in testing multi-chain crypto wallet features and complex service/operation workflows.

EDUCATION

2017 - 2022 **Posts and Telecommunications Institute of Technology**
Major: Multimedia Technology
Engineer Degree in Multimedia Technology and Design

CERTIFICATES

2022 Software Testing Certificate
2023 TOEIC 760

TECHNICAL EXPERTISES

Testing	Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Exploratory Testing, UI Testing, Mobile Testing
Analysis & Test Design	Requirement Analysis, Business Flow Analysis, End-to-End Flow Validation, Test Scenario Design, Test Case Design, Checklist Creation, Test Data Preparation
API / Database	Postman, Swagger, SQL, MongoDB, DBeaver
Tools / Process	Jira, Azure DevOps, Redmine, Slack, Discord, Agile/Scrum, UAT Support, Release Verification
English	Working proficiency
Soft skills	Strong analytical and problemsolving abilities. Excellent communication and team collaboration. Detail-oriented with strong organizational skills. Adaptable to fast-paced environments. Proactive learning and knowledge sharing.
Additional	Basic knowledge of automation testing; experience with Web, Mobile, and CMS platforms

AWARDS / HONORS

2025 Most Valuable Person Award (2025)

WORK EXPERIENCE

Jun 2024 - Present	Newwave Solutions JSC QA Lead • Lead a QA team of 3–5 members across assigned projects and testing activities. • Plan and align test scope, testing approach, and release readiness for web, mobile, CMS/admin, and backend-integrated systems. • Review test scenarios, test cases, and checklists to improve test coverage and testing quality. • Mentor and train interns and junior QA members in requirement analysis, test design, bug reporting, and execution approaches. • Propose testing solutions for complex business workflows and improve team working processes to enhance efficiency and quality. • Coordinate with BA, developers, and stakeholders to clarify requirements, identify risks, and ensure expected behavior is fully validated. • Oversee functional, regression, exploratory, and release verification testing across multiple environments. • Contribute to standardizing QA documentation and improving collaboration across teams. • Take full ownership of UAT support, including issue follow-up, feedback clarification, and validation of fixes during UAT cycles. • Organize and present sprint demos to showcase completed features and align stakeholder feedback for upcoming iterations.
Nov 2023 - Jun 2024	Newwave Solutions JSC QA Engineer • Analyze business requirements and clarify functional flows with BA, developers, and stakeholders. • Design test scenarios, test cases, and checklists for web, mobile, and backend-integrated systems. • Execute functional, regression, exploratory, and release verification testing across multiple environments. • Perform API testing and data validation using Postman, Swagger, SQL, and database tools. • Log, track, and verify defects using Jira/Redmine and coordinate closely with developers for resolution. • Support UAT and production validation to ensure release quality. • Contribute to improving test coverage and testing documentation
Jan 2022 - Sep 2022	NCCSoft Tester • Analyze requirements and prepare test cases, checklists, and test data for web and mobile applications. • Execute manual testing for core business workflows across multiple projects. • Perform regression testing, UI validation, and expected behavior verification based on requirements. • Log and track defects, perform retesting, and report testing status to PMs and stakeholders. • Work with developers and clients to clarify issues and improve requirement understanding. • Perform database validation and API checks for selected modules. • Support sprint testing activities and end-of-sprint reporting.

PROJECTS

Jan 2026 - Present	Enterprise Trading & Operations Management Platform QA Lead / QA Engineer • An enterprise platform combining marketplace, CMS, and operations management features. • Supports product listing, quotation, ordering, approval workflows, order lifecycle management, and token-based transactions. • Responsible for testing of core business flows, validation of business rules, role/permission logic, and cross-module consistency. • Led QA activities for key modules, reviewed test scenarios, aligned test priorities, and supported release readiness.
--------------------	--

- Worked closely with PO, BA, developers, and designers to clarify requirements, identify missing rules, and improve testing effectiveness.
- Took full responsibility for UAT support and organized sprint demos to present completed features and align feedback with stakeholders.
- **Technologies/tools:** Web Testing, CMS Testing, Manual Testing, API Testing, Jira/Redmine.
- **Key achievement:** Improved test coverage and supported stable releases for complex multi-module end-to-end workflows.

May 2024 - Dec 2025

Multi-Chain Crypto Wallet (Multiple Phases, Mobile Apps, Web & Chrome Extension)

QA Lead

- A multi-chain blockchain wallet product for mobile platforms and Chrome Extension, supporting wallet management, send/receive/swap flows, transaction history, NFT features, staking/withdrawal, mint token/ NFT and reward-related functions.
- The product supports multiple networks such as Bitcoin, Ethereum (EVM), XRP, TRON, BSC, Cardano and TON.
- Responsible for testing core wallet flows, transaction behaviors, and blockchain-related integrations.
- Conducted manual testing for core wallet flows, including send, receive, swap, transaction history, staking, withdrawal, and token reward-related features.
- Validated multi-chain transaction behavior across Bitcoin, Ethereum (EVM), XRP, TRON, BSC, Cardano and TON.
- Verified wallet balance updates, backend data mapping, and blockchain-integrated mobile app behavior.
- Tested NFT-related features and reward mechanisms within the application.
- Tested Chrome Extension wallet features alongside mobile app flows, validating cross-platform consistency, wallet interactions, and transaction-related behaviors.
- Performed functional, regression, exploratory, and integration testing to support stable releases and reliable user experience.
- Verified token integration with multiple wallets and platforms.
- Worked closely with developers and PM/Product team to clarify requirements, report defects, and validate fixes before release.
- **Technologies/tools used:** Mobile Testing, Manual Testing, API Testing, Blockchain Explorers, iOS, Android, EVM, Bitcoin, XRP, TRON, BSC, TON.
- **Key achievement:** Contributed to improving release stability and transaction reliability for multi-chain wallet features. Helped improve transaction reliability, data consistency, and release stability for multi-chain wallet features.

Apr 2025 - Oct 2025

Airport B2C Website & CMS Platform

QA Engineer

- A customer-facing airport B2C website integrated with CMS modules for managing content, service information, and supporting operational data.
- The system supports service-related user journeys and content synchronization between the website and CMS.
- Performed manual testing for an airport B2C website focused on customer-facing services and user journeys.
- Tested CMS modules used to manage content, service information, and supporting data for the B2C website.
- Verified end-to-end behavior between CMS updates and website display to ensure content accuracy and consistency.
- Executed functional, UI/UX, validation, and regression testing across both the website and CMS.
- **Technologies/tools used:** Web Testing, CMS Testing, UI/UX Testing, Regression Testing, API Testing.
- **Key achievement:** Ensured stable end-to-end behavior between CMS updates and website display, improving content accuracy and release quality.

Oct 2025 - Dec 2025

DeFi Points Management System

QA Engineer

- A points management system for tracking and aggregating user reward points from Vault, DEX, and DeFi activities.
 - The system provides APIs for current points summary, historical points breakdown, leaderboard, and webhook-based point updates, along with web-based point management verification. Performed API testing for core point-related endpoints, including current points summary, historical points breakdown, and leaderboard APIs.
 - Validated request headers, path/query parameters, status codes, response structures, and business rules for point calculation and aggregation.
 - Verified API logic for wallet address-based queries, pagination handling, date filters, top ranking conditions, and supported input rules.
 - Tested webhook-related flows, including authorization header, request body structure, and event data such as user address, token, tx hash, tx timestamp, and chain ID.
 - Validated business rules for reward point updates across Vault, DEX, and DeFi-related activities.
 - Logged and tracked defects, then worked with developers to clarify logic and verify fixes.
 - Performed end-to-end verification between API results and the web-based Point Management System to ensure displayed point data matched backend responses.
 - Supported regression testing for API and web point management features before release.
 - **Technologies/tools used:** API Testing, Postman, Webhook Testing, Manual Testing, Web Verification.
 - **Key achievement:** Helped ensure the accuracy of point calculation logic and consistency between API responses and displayed web data.
-

Jan 2024 - Apr 2024

IoT Dashboard Widget Configuration Platform

Tester

- A web-based IoT dashboard platform for configuring trend widgets, binding asset data sources, and customizing chart visualization settings.
 - Tested widget configuration flows, drag-and-drop behavior, data binding, chart properties, and end-to-end visualization output.
 - Worked directly with customers and the customer-side testing team; logged and tracked defects on Azure DevOps.
 - **Technologies/tools:** Web Testing, UI Testing, Validation Testing, End-to-End Testing, Azure DevOps.
-

Sep 2022 - Nov 2023

ERP / Project Management System

Tester

- A project management system for managing projects, participants, progress, and evaluations.
 - Analyzed requirements, wrote test cases/checklists, executed testing, and validated data using SQL/DBEaver.
 - Logged and tracked defects on Azure DevOps and reported test results to PMs and clients.
 - **Technologies/tools:** Azure DevOps, SQL, DBEaver, Swagger, Postman.
-
