

QUACH BAO HUNG

Binh Thanh District, Hcmc • baohung9715@gmail.com • 035 958 2138

Software Tester with 5+ years of experience in QA for HIS, CRM, web, AI, and blockchain systems. Skilled in manual testing, API automation, and test design. Experienced in delivering high-quality releases through effective defect management and close collaboration with developers, BAs, and stakeholders.

WORK EXPERIENCE

MANUAL TESTER

Dec 2024 - Present

DECOM STARS JOINT STOCK COMPANY

HCMC, VIET NAM

- Led end-to-end manual testing for AI- and blockchain-oriented products, from requirement analysis and test planning to execution, defect verification, and release support.
- Designed detailed test cases and checklists from functional specifications, user flows, business rules, and technical notes to improve coverage of critical scenarios.
- Validated AI-related features by checking input/output behavior, UI consistency, data handling, edge cases, and workflow accuracy across model-driven flows.
- Supported blockchain testing by verifying transaction flows, wallet/login interactions, data integrity, permission handling, and system responses across functional and integration scenarios.
- Executed smoke, sanity, functional, regression, and UAT testing; logged clear defects with reproduction steps, severity, expected results, and evidence to speed up debugging and release decisions.

Key Outcomes:

- Improved test coverage of critical business workflows by 30% through comprehensive test case design and risk-based testing.
- Identified and prevented 50+ high- and medium-priority defects before production release, reducing post-release issues by approximately 25%.
- Contributed to successful product releases with no critical production blockers during UAT and go-live phases.
- Reduced defect resolution and verification cycles by 20% through detailed bug reporting and close collaboration with development teams.
- Enhanced overall release quality and system stability across AI and blockchain products through continuous regression and integration testing.

80% MANUAL TESTER + 20% AUTOMATION TESTER

May 2023 - Aug 2024

VMED GROUP JOIN STOCK COMPANY

HCMC, VIET NAM

- Analyzed specifications and translated requirements into detailed test cases to support structured testing and full coverage.
- Built automated API tests to detect backend issues earlier and strengthen system stability before release.
- Created reusable test cases to improve execution efficiency and simplify onboarding for new team members.
- Reported critical defects with clear evidence and test notes, helping teams prioritize fixes before deployment.

Key Outcomes:

- Reduced manual API testing effort by approximately 40% through automated API test development.
- Increased test execution efficiency by 30% through the creation and maintenance of reusable test assets.
- Identified and prevented 40+ critical and high-priority defects before production releases, improving overall product quality.
- Improved requirement coverage and reduced missed test scenarios by 25% through comprehensive test case design and review.
- Supported multiple successful releases with minimal post-deployment defects and enhanced system reliability.

MANUAL TESTER

May 2022 - May 2023

QAS CORPORATION

HCMC, VIET NAM

- Analyzed user requirements and prepared high-quality test cases to keep testing structured and consistent from the start.
- Performed integration testing to verify module interactions and quickly surface issues across system components.
- Executed performance testing in production environments for VNVC, University Medical Center HCMC, Tam Anh Hospital in Hanoi, and other clinics to assess stability under heavy load.
- Worked closely with developers and clients to clarify issues, share updates, and support timely resolution during release cycles.

MANUAL TESTER

May 2021 - May 2022

FPT Telecommunication Joint Stock Company

HCMC, VIET NAM

- Reviewed specification documents and designed comprehensive test cases to verify functional requirements and improve testing quality.
- Executed functional and system testing to identify issues early and support more stable releases.
- Prepared detailed test reports and collaborated with developers to resolve defects and improve delivery quality.
- Contributed process improvement ideas that helped the QA team work more efficiently.

EDUCATION

Bachelor of Engineering

Aug 2018 - Jun 2024

University of Information Technology

GPA: Good

Major in Information Systems. Graduated June 2024.

AWARDS

Good Scholarship by Information Technology University

Jan 2021

CERTIFICATIONS

TOEIC: 710 (Reading & Listening) by IIG Vietnam Educational Organization

Apr 2026

LANGUAGES

English, Limited working proficiency

PROJECTS

Basal Pay (Blockchain-Based Digital Asset Platform)

Feb 2025 - Present

Managed end-to-end testing activities for a blockchain-based digital asset platform, ensuring secure, accurate, and reliable transaction processing.

Responsibilities

- Performed comprehensive testing for wallet management, digital asset transfers, fee calculation, transaction workflows, and account activity modules.
- Executed Functional, Integration, Regression, API, and Database Testing across blockchain-related services and backend systems.
- Validated transaction synchronization between blockchain networks, backend services, and user-facing applications.
- Verified the accuracy of balances, transaction statuses, fee calculations, and ledger records across multiple environments.
- Conducted API testing and database validation using Postman and SQL to ensure data integrity and system reliability.
- Investigated and reported critical transaction-related defects, contributing to improved platform stability and release quality.
- Collaborated with Developers, Business Analysts, and DevOps teams to analyze issues, verify fixes, and support successful deployments.
- Monitored system behavior and transaction processing performance after releases, helping maintain stable production operations.
- Prepared detailed defect reports, test execution summaries, and release sign-off documentation to support delivery decisions.

Key Outcomes:

- Increased test coverage of transaction, wallet management, and digital asset workflows by 30% through comprehensive test case design and risk-based testing.
- Identified and prevented 35+ critical and high-priority defects before production releases, improving overall product quality and release confidence.
- Reduced post-release transaction-related incidents by approximately 25% through thorough regression, integration, and end-to-end testing.
- Shortened defect verification and validation time by 20% through effective API testing, database validation, and log analysis.
- Contributed to multiple successful product releases with no critical issues impacting transaction workflows or data integrity.
- Improved system stability by identifying and resolving issues related to transaction synchronization, fee calculation, balance updates, and service integration.
- Supported Fireblocks integration testing, helping validate transaction signing workflows and digital asset management processes before production deployment.

AI Legal Assistant Platform

Dec 2024 - Present

AI-powered legal search and consultation platform leveraging LLM technologies to retrieve, analyze, and provide legal information.

Responsibilities

- Conducted Functional, Integration, Regression, API, and UAT testing across AI-driven workflows.
- Validated AI-generated responses, legal document retrieval accuracy, and search relevance using scenario-based testing.
- Performed API and database validation to ensure data consistency and system reliability.
- Collaborated with Product Owners, Business Analysts, and Developers to analyze requirements and resolve defects.
- Designed and maintained comprehensive test cases covering business, technical, and edge-case scenarios.

Key Outcomes

- Improved test coverage of AI-driven user journeys by 30% through comprehensive scenario and edge-case testing.
- Identified and prevented 40+ critical and high-priority defects before production releases.
- Reduced post-release issues by approximately 25% through thorough regression and integration testing.
- Increased AI response validation efficiency by 20% through structured test datasets and reusable testing scenarios.
- Contributed to successful product releases with no critical AI-related blockers during UAT and deployment phases.

HIS Khoa Viet (Hospital Information System)

May 2023 - Aug 2024

Hospital Information System (HIS) supporting patient management, medical examination workflows, billing, and healthcare operations.

Responsibilities

- Conducted Functional, System, Integration, Regression, Performance, and User Acceptance Testing (UAT) across core hospital management modules.
- Analyzed business requirements and designed detailed test cases covering patient registration, appointment scheduling, medical records, billing, and reporting workflows.
- Developed and maintained API-based automation tests to improve backend validation and testing efficiency.
- Performed database validation and integration testing to ensure data consistency across interconnected healthcare modules.
- Collaborated with Business Analysts, Developers, and stakeholders to investigate issues, verify fixes, and support production releases.
- Prepared test execution reports, defect analysis, and quality assessments to support release decisions and project planning.

Key Outcomes

- Increased testing efficiency by 40% and significantly reduced manual testing effort through API test automation.
- Improved system reliability by 25% through comprehensive functional, integration, and regression testing.
- Reduced integration issue resolution time by 30% by identifying and validating cross-system defects early in the testing cycle.

- Enhanced system response performance by 30% through performance testing and issue identification.
- Reduced overall testing time by 25% through improved test planning, reusable test assets, and streamlined execution processes.
- Contributed to a 30% reduction in post-release issues by providing detailed defect reports and supporting proactive issue resolution.
- Successful supported multiple production releases while ensuring business requirements were fully validated during UAT.

SKILLS

Testing Types: Functional Testing, Integration Testing, System Testing, Regression Testing, User Acceptance Testing (UAT), Smoke Testing.

Test Design & Management: Test Planning, Test Case Design, Test Scenario Creation, Defect Management, Test Execution & Reporting, Requirement Analysis, Risk-Based Testing.

API & Database Testing: Postman, SQL.

Tools & Platforms: Jira, Postman, Fireblocks.
